## Incident Command

### Smarter Planning, Enhanced Incident Management, Safer Incident Ground

Using MODAS Incident Command means dynamic operational and risk critical information is available where it is needed, when it is needed, for everyone who needs it.

MODAS Incident Command ensures that dynamic operational and risk critical information is available where it is needed, when it is needed, for everyone who needs it. MODAS Incident Command provides a simple, intuitive tool for Incident Commanders and Operational Officers to view and manage a range of information streams through a straightforward map based interface. Our Common Operating Picture ensures

that a clear Risk picture is quickly visualised and seamlessly communicated to all stake holders. Complex incidents require the establishment of order to facilitate effective Incident Ground management, so that Incident Commanders can make informed decisions to more effectively manage the Incident Ground and improve Incident Ground safety.

### Benefits

- ✓ Shared Common Operating Picture available in real time on multiple devices
- ✓ Enhanced incident ground management
- ✓ Improved decision making
- ✓ Decision logs
- ✓ Dynamic and analytical risk assessments
- ✓ Comprehensive audit trail
- ✓ Easy to use and train
- ✓ Scalable solution - small to large incidents
- ✓ Integrated with FRS CAD and back office data

[3tcsoftware.com](http://3tcsoftware.com)

The Incident Commander has the ability to create, update and share the details of the Incident Ground in real-time. A Common Operating Picture is shared between operational crews, control centers and senior management in Operational / Strategic / Regional Command Rooms and with other agencies.

## Increase efficiency and excellence:

- ✓ Facilitates accurate decision making keeping your crews safer
- ✓ Live Common Operating Picture
- ✓ Track multiple incidents simultaneously
- ✓ View the actual situation live with drone and body worn camera integration
